

Instructions for NetworkTester

1. Unzip the NetworkTester.rar compressed file. After unzipping, you will get a folder and an EXE file, as shown in the figure below:

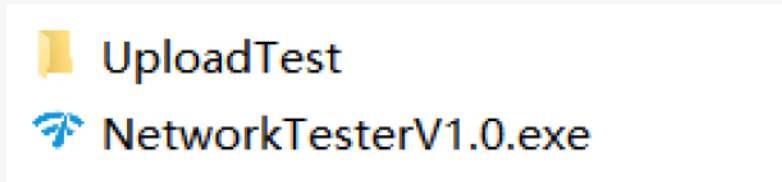

Figure 1 Test Tool Files

2. Double-click the "NetworkTesterV1.0.exe" file to run and launch the software:

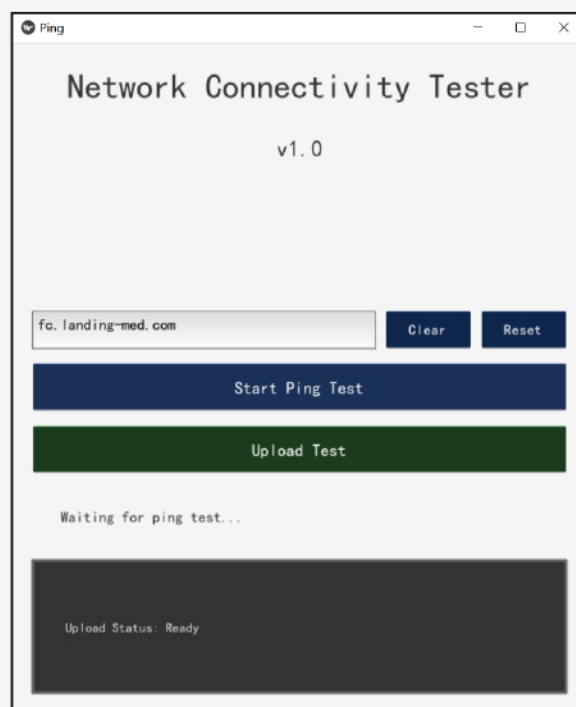

Figure 2 Software Interface

3. Click the "Start Ping Test" button to initiate the ping test. A black command prompt window will pop up and automatically close once the test is complete. Check the network latency results, Excellent Network: Average $\leq 10\text{ms}$; Substandard Network: Average $> 400\text{ms}$. Not recommended for using Landing Cloud Service.

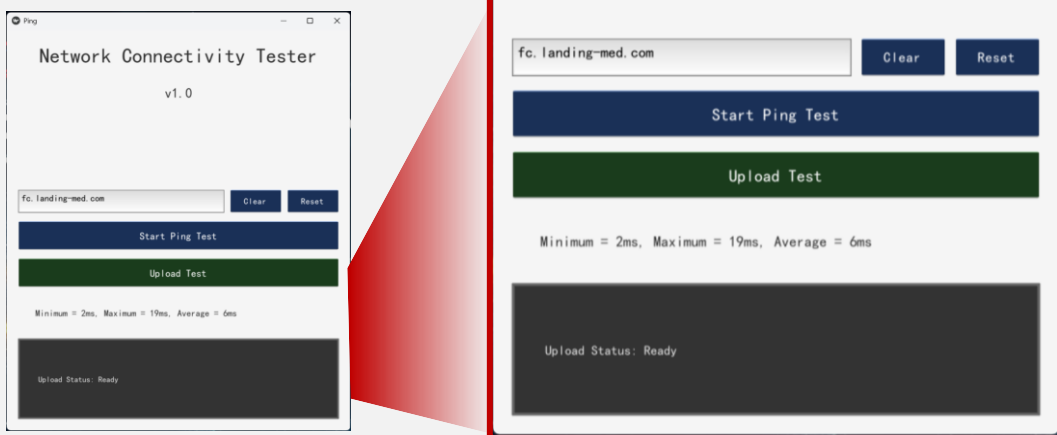

Figure 3 Latency Test Interface

4. Click the "Upload Test" button to start the upload test. The black window at the bottom of the software will display real-time upload information. Wait until "Upload Complete" appears to indicate the test is finished. Check the Average Speed result, Excellent Network: 8-10 MB/S; Substandard Network: $< 1\text{ MB/S}$. Not recommended for using Landing Cloud Service.
